About the survey

The 2022 Toronto Social Capital Study is based on a survey of 4,163 people in Toronto, aged 18 years and older, conducted during the summer of 2022. The survey was conducted in two parts. A core sample of 3,215 adults were surveyed between May 27 and August 3. An additional 948 residents in three specific regions of the city (the Greater Golden Mile, Rexdale and the Downsview area) were surveyed between August 5 and September 10.

The survey was conducted using a mix of methods, including accessing respondents from online survey panels and reaching respondents by telephone (landline and cellphone) or text message (through random dialing). Some respondents were identified as eligible through an interactive voice recording telephone pre-survey and then completed the survey by telephone with a live interviewer; a small number of respondents were identified by this pre-survey and chose to complete the survey online. The majority (75%) of the respondents completed the survey on a computer, tablet or smartphone, and the remainder (25%) spoke to a live interviewer over the phone.

The survey data is weighted by age, gender, educational attainment, immigration background (generation in Canada), racial identity and neighbourhood within Toronto, to ensure that survey results are representative of the actual population of the city. Because the data is weighted by neighbourhood within Toronto, and by these other criteria, the inclusion of the 948 additional respondents from the second part of the survey does not affect the survey's representativeness.

Q1. How long have you lived in the Greater Toronto area?

Q65. Do you currently have a physical condition; a cognitive difference; an emotional, psychological or mental health condition; or a health problem that limits the amount or the kind of activity that you can do on a typical day? For this question, please consider only conditions or difficulties that have lasted or are expected to last for six months or more.

Q65. Do you currently have a physical condition; a cognitive difference; an emotional, psychological or mental health condition; or a health problem that limits the amount or the kind of activity that you can do on a typical day? For this question, please consider only conditions or difficulties that have lasted or are expected to last for six months or more.

		Age						Gender		Sexual orientation		Family status				Household size
