33 Bloor Street East, Suite 900
Toronto, Ontario M4W 3H1

FOCUS CANADA 2013: CLIMATE CHANGE

Banner-Question Key

This detailed set of statistical tables shows survey results for the total general population and also by various subgroups of interest. For this table set there are three “banners” of subgroups, drawn from questions in the survey. The results have also been tested for significant differences within these subgroups. The statistical tests undertaken are an independent T-Test for means and independent Z-Test for percentages. The following key shows the questions used to create the banner subgroups and also what groups have been tested for significant differences in each of the banners.

In the tables that follow, **upper case letters** under the percentages indicate subgroup differences that are significant at the **95% level**.

BANNER 1

Q4A. As you may know, British Columbia now has a tax on all carbon based fuels used by consumers and businesses in the province, as a way to encourage reductions in greenhouse gas emissions generated in the province. This tax is now 7.2 cents per litre. This tax is “revenue neutral” which means the same amount raised through this tax each year is refunded – by law - to taxpayers in the form of lower personal income and corporate taxes.

Do you strongly support, somewhat support, somewhat oppose or strongly oppose this carbon tax for B.C.?

Q4A. As you may know, British Columbia now has a tax on all carbon based fuels used by consumers and businesses in the province, as a way to encourage reductions in greenhouse gas emissions generated in the province. This tax is now 7.2 cents per litre. This tax is “revenue neutral” which means the same amount raised through this tax each year is refunded – by law - to taxpayers in the form of lower personal income and corporate taxes.

Do you strongly support, somewhat support, somewhat oppose or strongly oppose this carbon tax for B.C.?

FOCUS CANADA 2013: CLIMATE CHANGE

Q7. There is considerable talk these days about the need to reduce our reliance on fossil fuels and shift to clean renewable forms of energy, such as wind power, solar power and biofuels. Do you believe it is possible or is not possible for your province to shift most of its energy requirements from fossil fuels to renewable energy?
