FROM 2026 SERIES REPORT:

Building Faster?

Public expectations for collaboration
in the Canadian federation

**Environics
Institute**
For Survey Research

*Confederation
of Tomorrow*

**Environics
Institute**
For Survey Research

The Environics Institute for Survey Research was established by Michael Adams in 2006 with a mandate to conduct in-depth public opinion and social research on the issues shaping Canada's future. It is through such research that Canadians can better understand themselves and their changing society.

Confederation
of Tomorrow

The Confederation of Tomorrow surveys give voice to Canadians about the major issues shaping the future of the federation and their political communities. They have been conducted annually since 2019 by an association of the country's leading public policy and socio-economic research organizations.

The 2026 study consists of a survey of 5,696 adults, conducted between February 14 and March 28, 2026 (92% of the responses were collected between February 19 and March 7); 91 percent of the responses were collected online. The remaining responses were collected by telephone (both landline and cell phone) from respondents living in the North or on First Nations reserves, or from francophone respondents in New Brunswick.

The survey is conducted on behalf of all the survey partners by the Environics Institute for Survey Research. The fieldwork is managed by Elemental DCI. The online portion of the survey drew respondents from the Leger LEO panel; the telephone interviews were conducted by Elemental DCI.

The survey data are weighted in three separate ways, depending on the population of interest. First, the complete survey data are weighted by region, gender, age, education, home language (separately for Quebec, New Brunswick and the rest of Canada) and Indigenous identity, so as to be representative of the Canadian population. Second, the territorial sample (when reported separately) is weighted by gender, age and education. Third, the Indigenous sample (when reported separately) is weighted by gender, age, region and education.
